

Tutorial For

v 1.4

Big Thx to SnowLeo,Dark_Ninja,Glaser,iFrosty,supermandal94

The theme I've been tested on these devices:

**iPhone 4G-iPhone 3G-iPod 4G-iPod 3G-iPod 2G MC under
iOS 4.1**

But for the tutorial I used my iPod 4th generation

MiBox360 Elite & MiBox360s is very easy to install if you follow all of the above steps correctly!!! Make sure you have read every step before asking any question on *How to install MiBox.*

I strongly recommend you not to apply the theme until you finish reading these steps

Update Log v 1.2 for both MiBox360 ver

- *Music player has been fix for non-hd user (pause and play button)**
- *Safari customization**
- *Removed Wallpaper icons shadow**
- *Removed top bar**
- *Added new icons for Photos & Videos**
- *Added new icon for iPhone user (iPod icon)**
- *Added sms icon for dock (instead of calendar for iPhone user)**
- *Default Avatar, Gamerpic & Gamertag for those who doesn't have Xbox Live**
- *Some UI have been updated**
- *Updated tutorial**

Update Log for v1.3

- *Added custom Loading screen**
- *Added Categories Background**
- *Added Maps as a Big Icon**
- *Added Springjump icons**
- *New Box Art (for missing art cover)**
- *New layout for iPhone users**
- *Updated tutorial ready for V1.3**

Update Log for v1.4

- *Sb Settings Theme that goes along with both styles**
- *Custom Loading for Categories**
- *Fix some issues for the Audio Player**
- *Fix major issues under iOS 4.2**
- *No more Wallpaper and Lockscreen on the go (doesn't work under 4.2)**
- *Added a custom icon for MyWi**

Step 1: What you need!?

First, you need a jailbroken iPod/iPhone(duh)!!!

Here's the list of the applications you'll need before you install the theme:

- 1. Cydia**
- 2. Winterboard (on cydia)**
- 3. iBlank(Free) or Gridlock(Paid) (on cydia)**
- 5. Categories (Free) or Categories SB (Paid) (on cydia)**
- 6. MiBox360**
- 7. iFunBox (PC/MAC) or similar program**
- 8. Infiniboard (optional)**
- 9. SB Settings (recommended)**

I strongly recommend you to use **Gridlock instead of **iBlank**!!! It will take less time to configure the theme...**

Step 2: Preparing your iPod/iPhone

This step is crucial for the proper functioning of the theme!!! Create 3 folders using categories (write exactly as in the field below)

1. Apps

2. Games

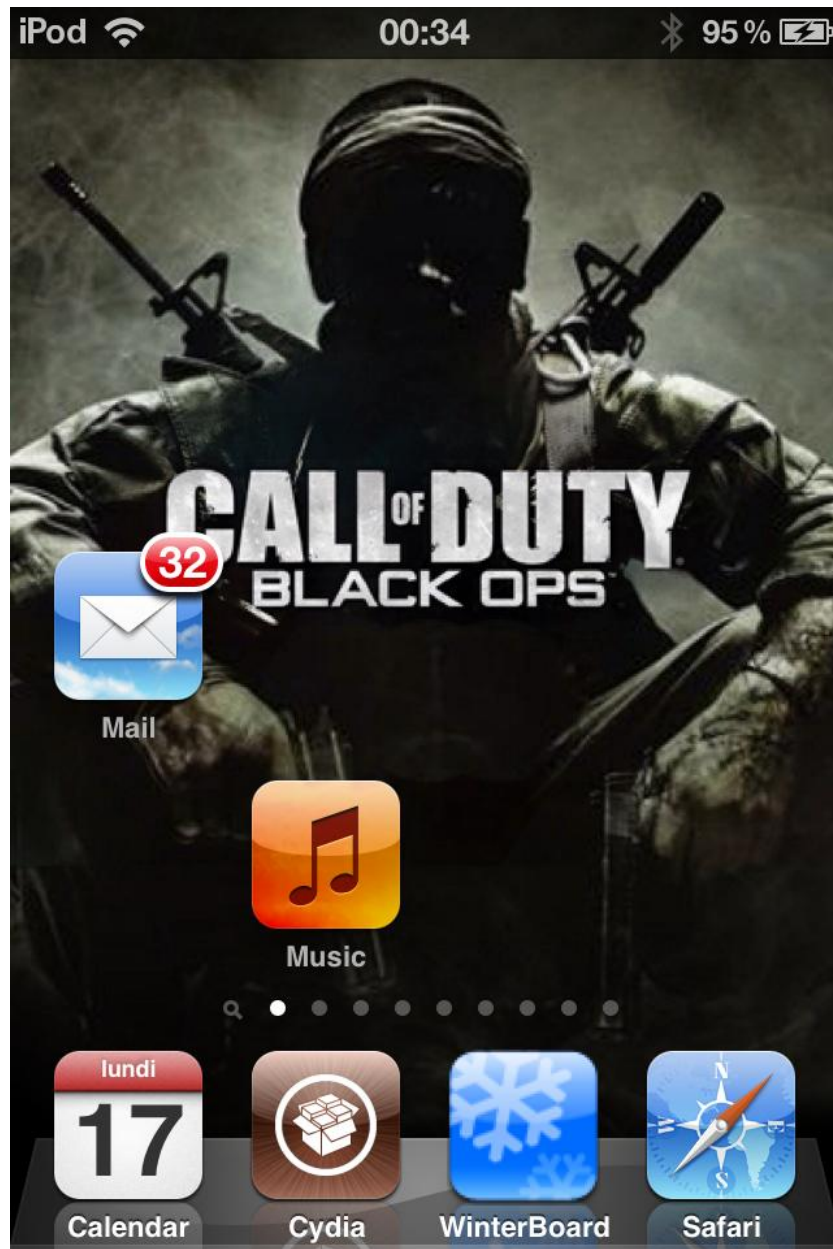

3. Social

After you've done that, just check out the images below to see where all the applications and folders go.

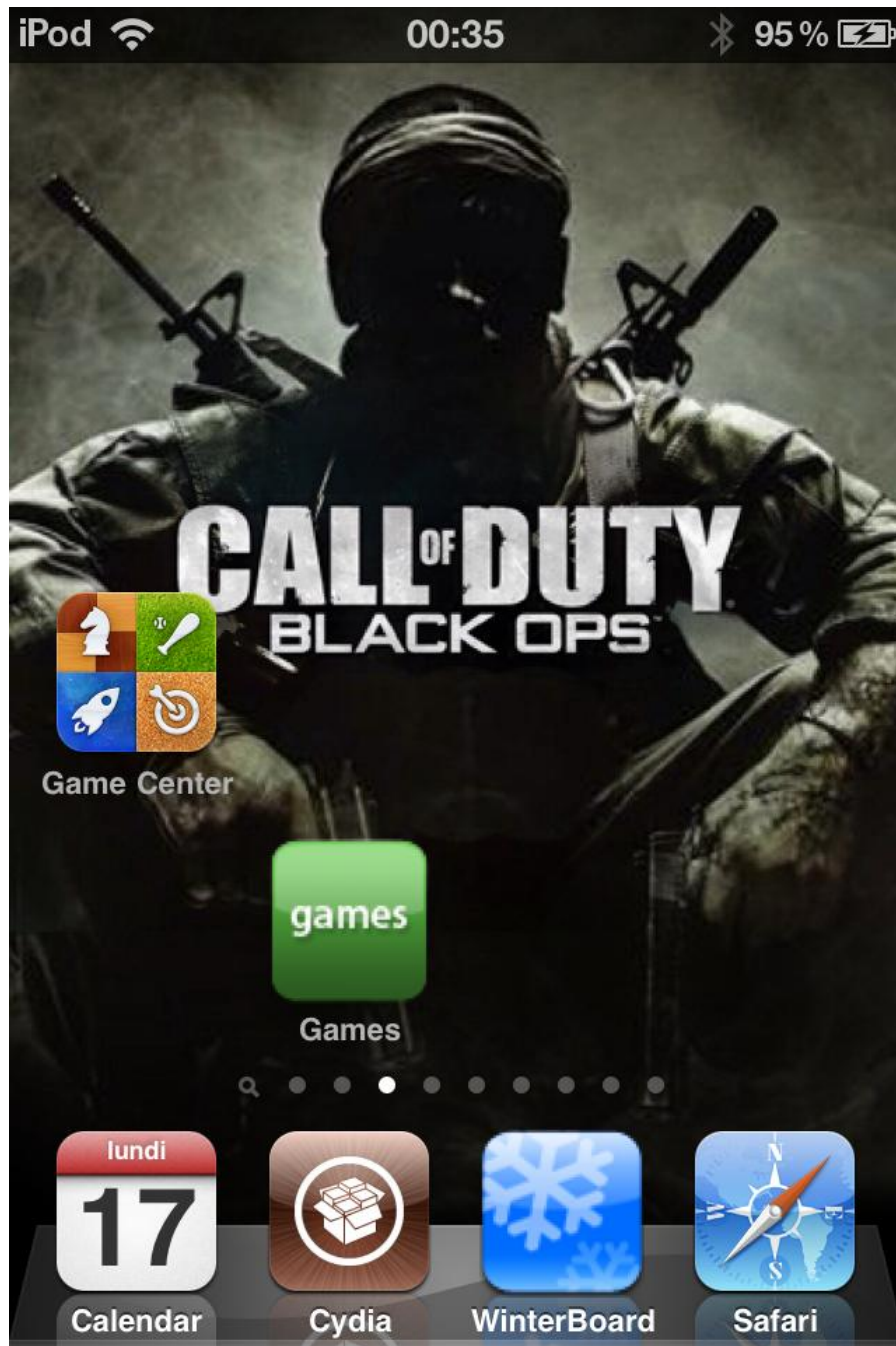

Note: you can place these newly created folders in the page you want!!! Music/iPod could be your third page but by default I put it in the first page, so as Apps or Games could be your first, second, third page... it doesn't really matter!!! Place the Big Icons regarding to what's your needs

Step 3: Following preparation

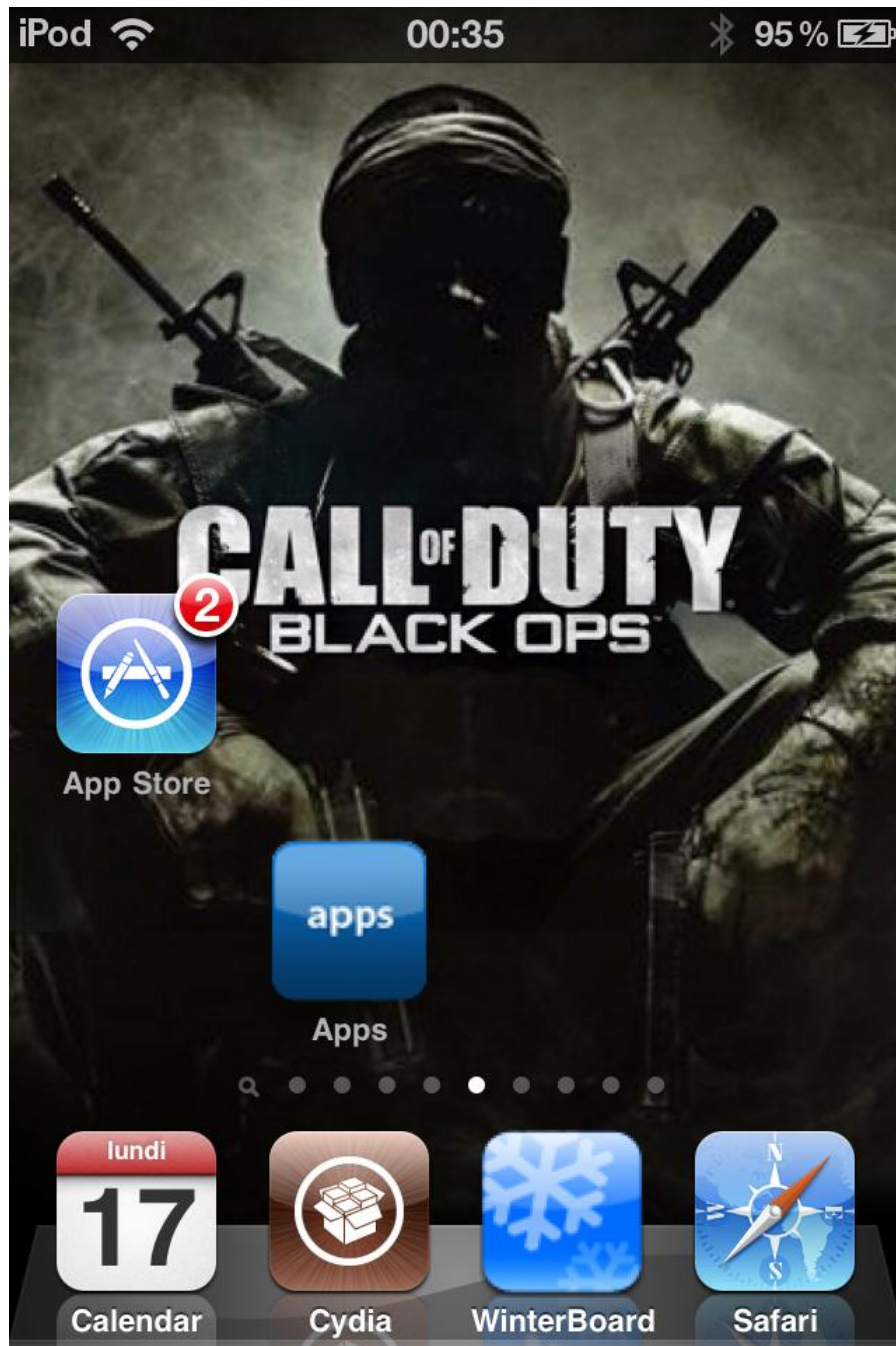

Before we start moving around icons, remember to create Blank icons if you're using iBlank!!!

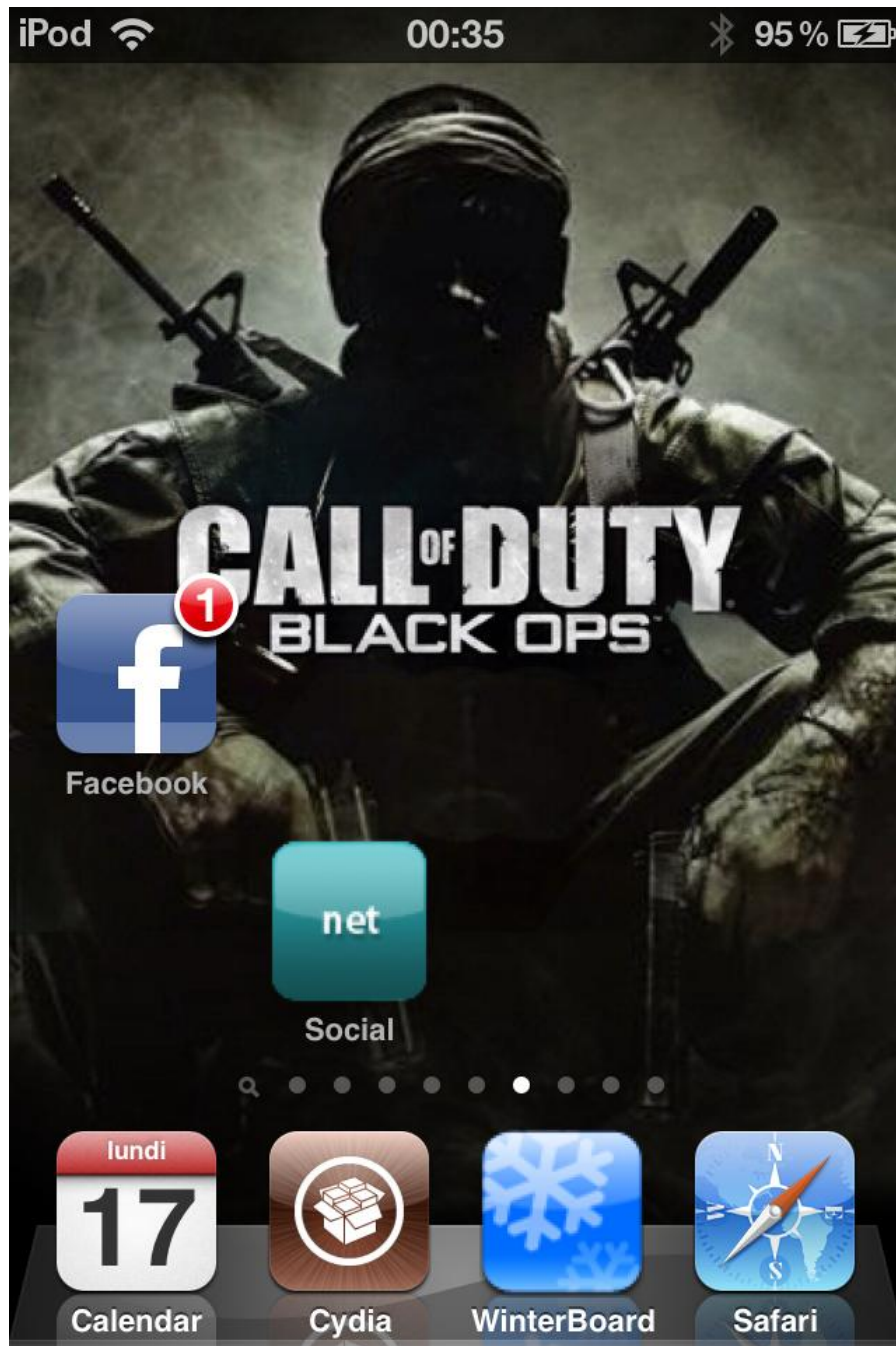

So let see what we have here... we have **Mail** then under that we have **Music (or iPod)**! In the dock we have **Calendar, WinterBoard, Cydia** and **Safari**... **For iPhone user, replace Mail by Phone & Calendar by SMS**

Second page we have, **Game Center (or Installous)** and the folder that you've created **Games** (move every game you have in the **Games via Categories folder**)

Third page we have **App Store** or **FaceTime** and your **Apps** folder
(move every other apps in your App Folder)

In the fourth page we **Youtube, VEVO or Facebook** and your **Social folder (move every other Social app in this folder)**

In the fifth page we have **iTunes** and **Videos**

(For iPhone user replace or not iTunes by Mail and Videos by Maps)

In the sixth page we have **Camera** and **Photos**

And for the final page we have **Categories** and **Settings**

Step 4: HTML for beginner: P

For the advance user, just find iBox in the html files (LockBackground.html and Widget.html) and replace it by your actual GamerTag on the Xbox Live

Okay now have come the part where most of you will have some difficulties so I'll try my best to explain it well!!! **Note that if you don't do that step you will be stick with the default Avatar,GamerPic and GamerCard :S**

First you will need to **edit the html files** you have in the **MiBox360 folder** that you have downloaded!!! You can always use NotePad to do this but I recommend you to use NotePad++. Now, find the **Widget.html** file, right click on it and choose your favourite text editor. Once your html file is open, search inside the html strings for **iBox**...This is what you should see inside the html file...

Widget.html

```
<body>

<div id="Gamerpic">

<SPAN style="position: absolute; top: 50 px; left: 130 px;width:
219px; height: 65px">

    </SPAN>

</a>

</div>

<div id="Avatar">

</div>

</body></html>
```

Now change **iBox** to your actual **GamerTag** you have on the **Xbox Live... example:**

```

<table><td>

<div id="Layer"></div>

<div id="Layer"></div>

<div id="GamerCard"></div>

<div id="Avatar"></div>

<table/><td/>

</body></html>
```

LockBackground.html (After)

```
<body>

<table><td>

<div id="Layer"></div>

<div id="Layer"></div>

<div id="GamerCard"></div>

<div id="Avatar"></div>

<table/><td/>

</body></html>
```

Once you have done these little modifications, you're ready to upload the theme back into your iPod/iPhone!!! **Note, to make all the magic work, you will need to put Summerboard on in WinterBoard**

Step 5: Springjumps(optional)

It's always cool to navigate by swiping your finger on your screen but sometimes it's better to go directly to the page you want!!!

The layout for spring jump is not very complicated...

(Make sure page titles option is off)

After you've finished downloaded Springjumps via Cydia, go through the Settings of Springjumps and put on Page 0, Page 1, Page 2, Page 3, Page 6 **(For iPhone user put 5 instead of 6)**

IF YOU WANT TO USE SPRINGJUMPS CORRECTLY MAKE SURE YOUR LAYOUT IS:

Page 0(Mail and Music/Phone and iPod), Page 1(GameCenter and Games), Page 2(AppStore and Apps), Page 3(Facebook or YouTube or VEVO and Social), Page 5 or 6(Categories and Settings)

Okay here's now how it's work!!!

First put your Springjumps icons of Page 1, 2, 3 and 6(or 5) at the top of Page 0 (where mail/phone and music/iPod is) in order. Second, move the Springjumps icons of Page 0 at the right top corner of Page 5 or 6 (Categories and Settings)

This is how it should look like (Page 0 & Page 5 or 6)

F.A.Q for MiBox360 Elite & MiBox360s

Q: Why MiBox is using Categories instead of Folder Enhancer or simply the default iOS Folder

A: The reason is quite simple...The problem with Folder Enhancer or the default iOS folder is that the icons cannot be customized for bigger size

Q: Why I don't see my Avatar,GamerPic and GamerCard

A: There are only two options for that kind of problem...

.First make sure you have signals (Wifi or 3G) because if you don't have signals the information of your Avatar,GamerPic and Gamercard cannot be retrieve

.Second, make sure that your html files has been configured well...If one string is missing or your gamertag is not exactly like the one on your xbox live this will lead to a dead end so no information can be retrieve

Know issues

Icons are too big for Multitasking Bar

Overlay shadow over icons under 4.2
