

CORE

1.1

FEATURES:

- **weather iWidget**, fully animated. A completely reworked version of UniAW 6.4 with new weather icons, new photos, new layout, new fonts, new everything...Will support GPS if the WidgetWeather tweak will be fixed for iOS 8

Supported languages for the weather: English, Spanish, French, German, Chinese, Russian, Dutch, Finnish, Danish and Italian

12/24 hours clock, Yahoo or Accuweather source, many different options, for animations, weather icons and backgrounds

- **Lockscreen Widget** for use with LockHTML3 or GroovyLock

- **SBHTML Widget**

- **Photo Slideshow**. Shows theme photos or your own photos randomly.

- **RSS-Reader**. Shows your favorite or one of the many included RSS feeds, supports RSS feeds with photos (!)

All of these Widgets use a super **simple setup menu** are optional and free placeable anywhere on your pages.

Auto-detection of your device/screen size up to iPhone6 plus. One widget for all devices (!)

- **150 icons** (and counting) including native fullHD 180x180 pixel icons for the 6 Plus (no blurry upscaled icons)

- Theme **Wallpapers** for all devices and screen sizes, with and without statusbar

- **4 Iconomatics/icon styles: Round, Squared, Switch-styled and Golden**/styles

- Icon and Wallpaper **PSDs** (at modmyi forum)

- **Settings icons** themed

- **Badges**

- **Iconoclasm** layout

ADDITIONAL ICONS and PSDs:

<https://www.dropbox.com/sh/focflzgti...70I5T2dKa?dl=0>

SETUP:

1. Install this *theme* and *iWidgets* and *Iconomatic* from Cydia
For the wallpapers install my Wallpaper add ons and for the lockscreen or SBHTML the other free CORE packages
For the Badges to work you need the tweak *ThemeLib* from this repo: **<http://coolstar.org/publicrepo/>**
2. Enable at Winterboard:
 - * **CORE theme** plus
 - * one of the **CORE icon style themes (= Iconomatic)**
3. Start Iconomatic, enable it and set "use Overlay" and "use Shadow" (= from Core theme/winterboard)
4. Enable the iWidgets you want to use by long pressing the screen. Make your setup at it's popup menu.
5. Apply theme wallpapers from Settings>choose wallpaper
6. If you use also SBHTML, GroovyLock or LockHTML 3 enable the Widgets and Lockscreens from these tweaks.

NOTE: This are amazing AllInOne iWidgets, detecting your device and screensize !

But one thing isn't possible: Each Widget contains a file called **Widget.plist** which is responsible for the first position of the iWidget on your device.

By default it's set for iPhone 6, so if you have a 6 Plus or iPhone 5/c/s you can delete "Widget.plist" and rename your correspondending "Widget_iph5/6plus.plist" to "Widget.plist".
Thought you can always place iWidgets manually on your screen.

THINGS YOU SHOULD KNOW:

Respring issues with new iPhones (**READ ME !!!**)

iPhone 6 Plus is currently affected by resprings with any kind of

Widgets, why ?

The truth is: No one knows that, could be a iOS bug or because of iWidgets, LockHTML3, SBHTML and GroovyLock and even Winterboard is still not or not fully updated to iOS 8 and iPhone 6/+

I have my full focus on this issue (owner of a 6 Plus)

But: LockHTML4 for iOS 8 is nearly ready and will be released very soon !

For **iWidgets** use this iOS 8 compatible **Beta 1.2**. It will fix at least some resprings issues: [\[Tweak\] iWidgets](#)

For iPhone 6 Plus users it's also recommended to disable the screen rotation (iWidgets disappear) and disable the "Show_birds" function of UniAW (disabled by default)

Iconoclasm

Iconoclasm layout comes with the main theme from Cydia. It's thought for using only the UNIAW widget at top and icons below.

1. At Settings/Iconoclasm enable Iconoclasm and Per-Page layouts
2. Choose "System Default" (**NOT "._System Default" !!!**) for everything except:
3. For Page 1 choose "CORE"
4. Respring

Replacing Slideshow photos

You can add your own photos. Copy them to User/Library/iWidges/CORE iWidget Slideshow/Private/Photos/Own. They will be scaled right for your device but landscape photos are recommended

Own RSS feeds

You can choose from the build in feeds or replace them with your own at User/Library/iWidges/CORE iWidget RSS/Options.plist.

Not all RSS feeds provide photos and the layout won't be always perfect for any rss feed.

Placing icons

Use Iconoclasm or HomescreenDesigner with iOS 8. Gridlock doesn't work on iOS 8. But another tweak called Anchor is at work.

Yahoo Location code

To find your Yahoo location code open this website <https://weather.yahoo.com> search for your city and then take a look at the adressbar of your browser, the last 6 or 7 digits is your Yahoo location code

Don't use ZIP codes or anything else !!!!

Lockscreen

iWidgets, LockHTML3 and GroovyLock are not iOS 8 compatible and some kind of buggy. I included a Lockscreen Widget, but sorry, currently I can give no guarantee for working right on every device. If you have issues better wait for updates of this tweaks and don't use it

Transparent dock:

You can use the free tweak DockShift or others (Springtomize)

Unthemed icons ?

You can request icons at my forum, but i can't promise making every icon for you.

If you tell me the right bundle folder and all icon names you increase the chances.
