RSS-Reader:

Setup at: `/User/Library/iWidgets/Shine - News (Widget)/Widget.html` at line...`cssfeed.addFeed("CNN", "http://www.....rss")`

Slideshow (use it with own pictures) :

Setup: Copy 10 own photos, size doesn't matter at: `/User/Library/iWidgets/Shine - Photos (Widget)/Private/Photos/...here...` Widget shows these pics randomly.

Twitter-Widget:

Setup: Replace "modmyi" with other Twitter names at: `/User/Library/iWidgets/Shine - Twitter (Widget)/Widget.html` at line...`cssfeed.addFeed("ModMyi", "http://api.twitter.com/1/statuses/user_timeline.rss?screen_name=modmyi")`

3 Lockscreen themes, fully animated:

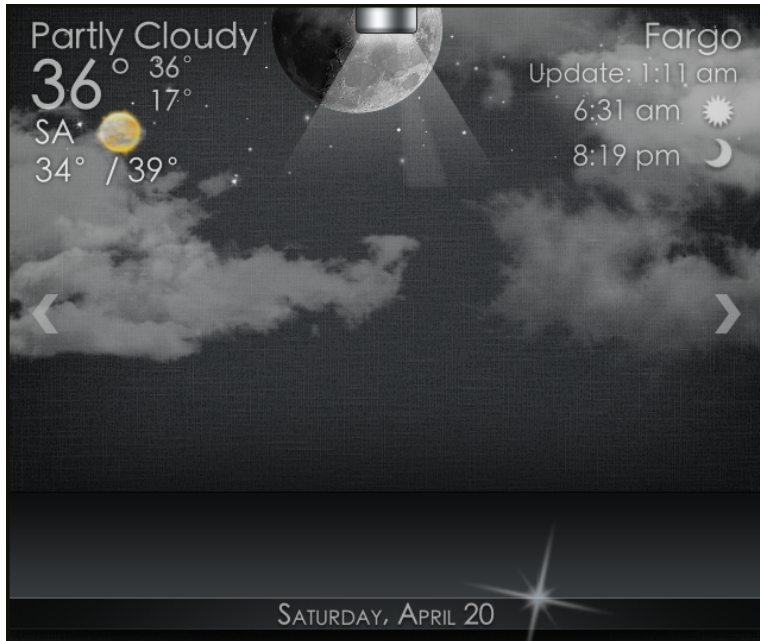

Setup at: `/Library/Themes/Lockscreen1-3.theme/Configs/Digital Clock-Config.js` or `....../Setup/Config.js`

WinterBoard Widgets:

Animated Weather (incl. GPS, reworked UniAW6)

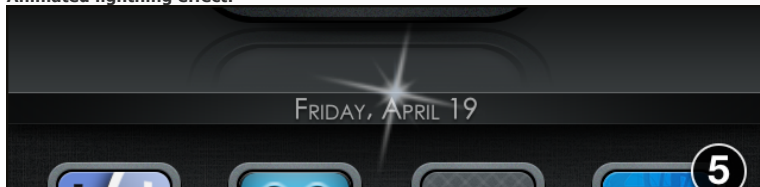

Setup at `/Library/Themes/SHINE Weather.theme/Setup/Config.js` (language, GPS, yahoo location code)

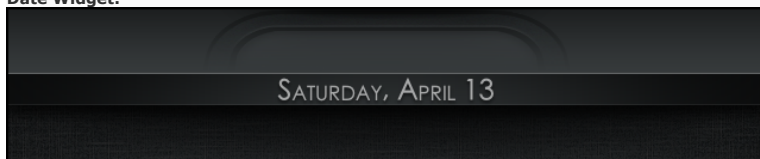

Animated Spotlight in six optional colors:

Animated lightning effect:

Date Widget:

Setup at `/Library/Themes/SHINE Date.theme/Configs/Digital Clock-Config.js`

Supports normal (Day-Date-Month) and US date (Day-Month-Date) in English, German, French, Italian, Spanish and Dutch

Needed:

iPhone 4, 4s or 5, Gridlock2 (paid) and iWidgets (free)

If you want the **iWidgets starting apps**: iWidgetTapper (free at Cydia)

Setup:

1. Enable the Shine theme and other optional add-ons at Winterboard
2. Place your icons below the shelf
3. Enable your favorite iWidgets (long press anywhere on the screen and a list with all available iWidgets opens)
4. Have fun ;)

ColorKeyboard:

1. Start Settings - ColorKeyboard and "Select Theme" = Shine

2. Open "Customize Backgrounds", enable CustomBG for both Standard and Alert style and setup the new Backgrounds of Shine for both Portrait and Landscape style.

Note: This ColorKeyboard is coded plus uses photoshopped backgrounds. Only this method guarantees that it works for any language and lettering all over the world.

FAQ:

*** Is this theme laggy ?**

No, even if it's fully loaded with all available gadgets it's fast and smooth (see realtime Video)

* Does it **drain battery** ?

Calculating and displaying graphics needs RAM and CPU power. That's a physical fact on any computer with any program.
But all widgets and animations of SHINE are optional. If you notice any issue just reduce the count of widgets.

* **What are iWidgets** and how do they work ?

iWidgets are free placeable widgets on your screen and scroll with the pages.

->Just long press anywhere on your screen and choose one or more Shine iWidgets for each page. They are always placed right for the SHINE layout. If you accidentally moved one of it and want it back to the right position, delete the iWidget and just enable it again.

* Can this **iWidgets** icons **start apps** ?

Yes, they can, install the new free tweak "iWidgetTapper" from Cydia. You can allocate any iWidget a matching app or even a web address (e. g. Clock iWidget - Clock app). **NOTE:** If you use iWidgetTapper make sure you DISABLE the "User Interaction" of the iWidgets.

*Why **doesn't iWidget work** for me ?

Users reported issues with InfiniBoard: Don't enable InfiniBoard together with iWidgets. Other conflicts are not known.

* Why are some of my **UI graphics** or some **Icons** (like Folder background, Player buttons) not themed ?

They are, but it's a problem of cached old graphics on iOS. Install and run "iCleaner" from Cydia and delete the "Cache files".

* Why is my **phone background** and my **Wallpaper** (when opening a folder) not themed ?

A general issue on Winterboard. **To fix it:** Open the Shine.theme folder, search for my "DefaultHomescreen.png" and "DefaultLockscreen.png" copy both with iFile to your Camera roll and then set each from the iPhone settings or the Camera Roll as your new Homescreen and Lockscreen wallpaper.

* Why are some **Cydia app icons** **unthemed** ?

Cydia app icons never use any icon mask. You can use the free Cydia app "Theme Icon Maker" (TIM). This app recognizes all unthemed Cydia apps icons, creates matching bundle folders for each and themes all your missing icons.

*Why doesn't the **WoodenMod** work?

Because mods of any theme must be placed above the main theme at Winterboard.

For the Lockscreen themes there's a alternative Background with a wooden shelf stored at the folder "Extras" inside the Shine.theme folder. You can copy it to any of the Lockscreens.

*Why doesn't the **weather** work for me ?

Don't use US or other ZIP codes or anything else ! **Use only Yahoo weather location codes:**

1. Open <http://weather.yahoo.com/>
2. Search for your city, press "GO"
3. At the address bar of your browser you'll now see something like this:
<http://weather.yahoo.com/germany/bavaria/schweinfurt-693838>
This new number at the end is your yahoo location code.

*Do I need the **Summerboard mode** for this theme ?

No, only for some problematic icons, but not generally.

It's **not allowed** to use, release, post or sell graphics or code of Shine for any other theme or at other threads. If you're not sure please write me a email and ask for my permission. Thanks.
