

**Hello and thanks a lot for purchasing and supporting this theme.**

# 1ONE

## **Compatible with:**

iPhone 4, 4s, 5, 5c and 5s and iOS 7

## **Needed:**

Winterboard

iWidgets (free at Cydia)

Iconomatic (free at Cydia)

Optional for the Lockscreen: GroovyLock (free at Cydia) or LockHTML3 (paid)

## **SETUP:**

### **Theme:**

Enable the 1ONE theme and one of the seven icon style themes at Winterboard.

### **Main Widget:**

-For using iWidgets long-press anywhere on the screen and make your setup at the iWidget menu.

-Location code > Open this website: <https://weather.yahoo.com/>, type in your city at the search field and look at the addressbar of your browser, the 6 or 7 digits number at the end is your location code. For GPS weather you must also install the free tweak -Widget Weather- from Cydia.

-To change the build-in portrait photo, name any of your photos to "You.png" (even if it's a JPG photo) and copy it to this path on your device: var/mobile/Library/iWidgets/1ONE Widget Small (or Large)/Images/...here... Size and shape doesn't matter, my widget scales and rounds it

-To change the build-in slideshow you can replace the pictures "1.png" to "10.png" with any other pictures here:var/mobile/Library/iWidgets/1ONE Widget Small (or Large)/Images/Photos/...here...

### **RSS widget:**

Choose one of the sources at the widget menu. You can also change the text, displayed on the left of the feed and the refresh interval.

To add/change feeds open the text file **Options.plist** (with iFile) at User/Library/iWidgets/1ONE RSS.../Options.plist. Example: at <key>BBC News</key> change the title of the feed and below, after <string>, add any other feed.

### **Twitter widget:**

This auto-refreshing twitter widgets display by default the latest tweets of people I follow. Please read the pictured PDF Setup-guide below.

### **Wallpapers**

Theme wallpapers are stored inside the 1ONE-theme folder. Open one of it with iFile, save it to your camera roll and enable it from Settings or Photo app.

### **Dynamic Wallpaper**

First enable the "1ONE Dynamic Wallpaper" theme at Winterboard, then start your Settings app and choose the 1ONE Dynamic Wallpaper

### **Zeppelin**

Start Settings/Zeppelin and enable the 1ONE logo

### **Lockscreen**

- If you use LockHTML3 (recommended) enable the small or large Main Widget for your lockscreen and make your setup at the **menu**.
- If you use GroovyLock enable "1ONE Widget(large or small) GroovyLock" at Settings/GroovyLock. In this case you must do a manually setup at this file:  
User/Library/GroovyLock/1ONE Widget (large or small) GroovyLock/**config.js**

More questions ?

# INSTRUCTIONS for the TWITTER WIDGET:

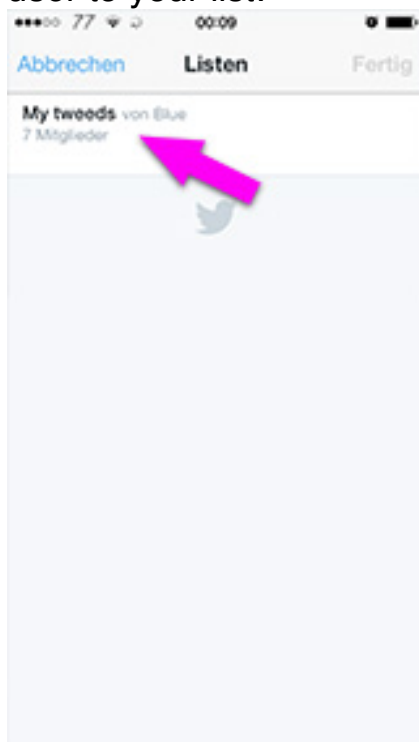

1. First we must create a **List of Twitter users you want to follow**. You can do this directly on your iDevice. Start your Twitter app, choose a Twitter user you want to follow with the iWidget, e. G. MacCiti and press the **settings icon**:

Now a menu pops up, choose **add/remove to list**:

Now a **menu with your List(s) pops up**. Press on your list to add this user to your list:

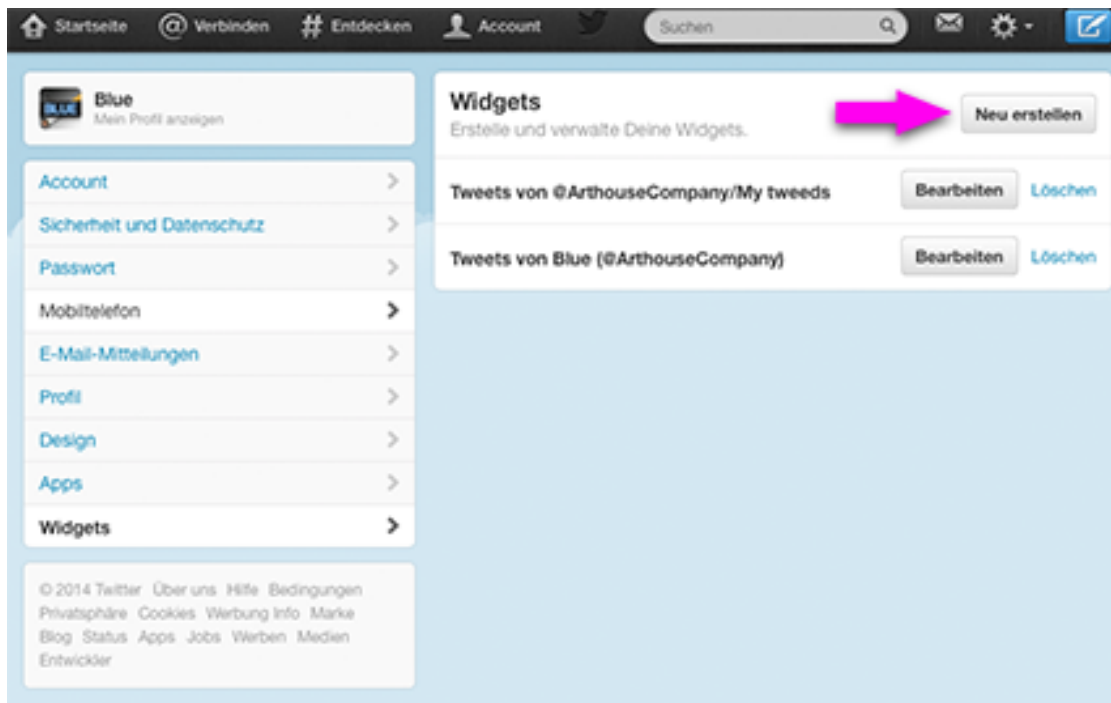

**Note:** You can later add or remove any user to/from this list directly on your iDevice. The iWidget will always be up to date.

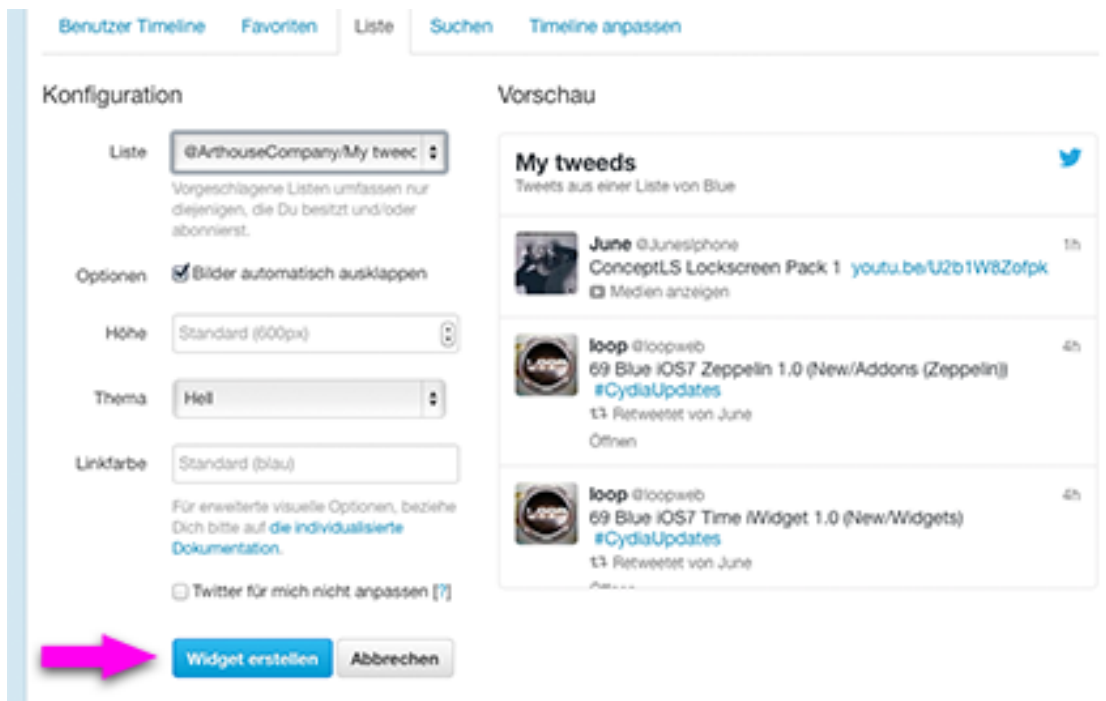

## 2 Now we need a **Widget ID/Number** for your own **Twitter List**

Open <https://twitter.com/settings/widgets> and log in to your Twitter account.

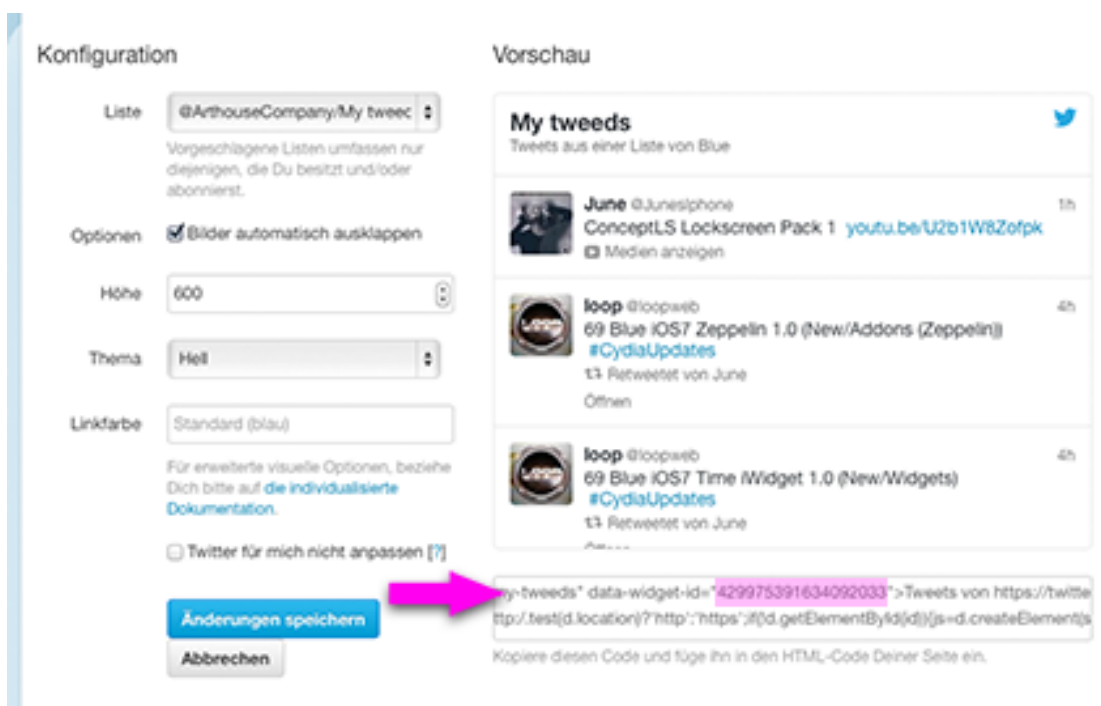

choose: **New Widget**

now choose **create Widget** (forget about all other settings at this website)

Now you see a widget code at bottom right. **Inside is your WidgetID/ Number** that we need for the iWidget.

Copy this number and paste it to the iWidget on your iDevice here:

## > User/Library/iWidgets/1ONE Twitter Large(or Small)/Widget.html:

That's ist. Make sure you **save this number** somewhere, in case this package will be updated. But you can also **see this number if you open the Twitter Website** (see link above) and choose

your Twitter widget from there.
