

UN ULTIMATE Widgets

a NEW CLASS of iWidgets
by Blue

**Please don't support piracy and pay others for their work like you want to get paid for your job !
WE make your iDevice so unique !**

WIDGETs:

- 2 Twitter widgets: dark and light
- 4 RSS-Readers: small, big, dark, light
- 2 Instagram Slideshows: dark and light
- 4 Photo-Slideshows: small, big, dark and light
- 2 Calendars: dark and light
- 3 Clocks: Circular, squared and transparent

- 1 Weather/Clock: digital with picture
- 1 Weather/Clock: analog clock
- 1 Weather/Clock: digital small
- 1 UniAW mini: Fully animated Weather widget

Widgets supporting the following languages: English, German, French, Spanish, Turkish, Danish, Italian.

The UniAWmini widgets supports in addition Russian, Chinese, Dutch and Finnish, but not Danish.

Twitter and all other widgets work worldwide.

FAQ and HELP:

*Do this widgets support **GPS**-located Weather ?

Yes, enable GPS at the widget menu. But you must have installed and enabled the free tweak 'Widget Weather' from Cydia.

At the Settings App>WidgetWeather also make sure you've enabled MyLocation. The yahoo location code is irrelevant for the widgets now.

* How can I find my **yahoo Location/City code** for the weather widgets ?

Open this website: yahoo.weather.com, at the search field type in your city and look at the adressbar of your browser now, the 6 or 7 digits number at the end is your Yahoo location/city code.
DON'T USE ZIP Codes or anything ELSE !

*How can I setup the **Twitter** widget ?

Please read my detailed and pictured PDF-Instructions. The instructions are stored ON YOUR DEVICE at:

User/Library/iWidgets/Blue's Twitter Dark/...here...

*How can I move or **delete this iWidgets** ?

Long-press any widget or app icon (=Wiggle-mode). Now delete iWidgets or drag them around.

* How can I **freely place my app icons** or place them around the iWidgets ?

Use one of this Cydia tweaks: Gridlock, iBlank for iOS 7, HomescreenDesigner or Iconoclasm. I recommend Gridlock, nothing is easier to use.

* Can I **replace the photo** at the Multi-Widget ?

Yes, just rename any of your pictures to "Photo.png" (even if it's a .jpg-file) and copy it to this path on your device:

/User/Library/iWidgets/Blue's iWidget Multi Photo/Images/Photo.png. The size doesn't matter, the widget scales it for you.

*Can i use own photos for the **Slideshow** widgets ?

Yes, just name 10 of your pictures to "1.png". "2.png" and so on.

Name them ".png" even if it's a ".jpg" file. Just copy your pictures to this path on your device:

/User/Library/iWidgets/Blue's iWidget Slideshow.../Private/Photos/...here... The size doesn't matter, the widget scales it for you.

*Why doesn't my **RSS** widget show **photos** to the news ?

This depends on the source you've chosen, some rss-feeds generally don't provide photos or sometimes show news without photos.

Also the text and photo layout may differ depending on the rss-feed you've chosen.

*Can I add more sources/feeds to the RSS-iWidgets ?

Yes, open the **Options.plist** file inside the rss widget folder. Copy the code of one of the sources (e.g: `<key>Yahoo Sports....</string>`)

and paste it below the last source. Now rename "Yahoo Sports" to whatever you like and replace the yahoo rss feed (`HTTP://.....<`) with

another feed. Next time you can also choose your rss-feed at the iWidget menu 😊

INSTRUCTIONS for the TWITTER WIDGET:

1. First we must create a **List of Twitter users you want to follow**. You can do this directly on your iDevice. Start your Twitter app, choose a Twitter user you want to follow with the iWidget, e. G. MacCiti and press the **settings icon**:

Now a menu pops up, choose **add/remove to list**:

Now a **menu with your List(s)** pops up. Press on your list to add this user to your list:

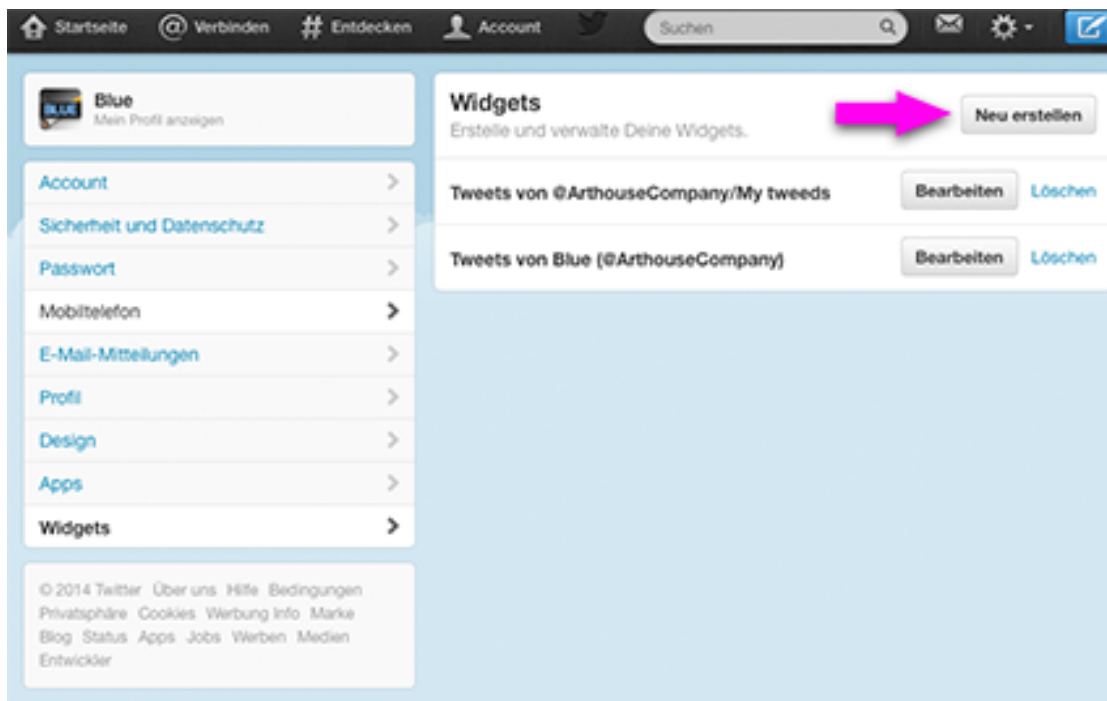

Note: You can later add or remove any user to/from this list directly on your iDevice. The iWidget will always be up to date.

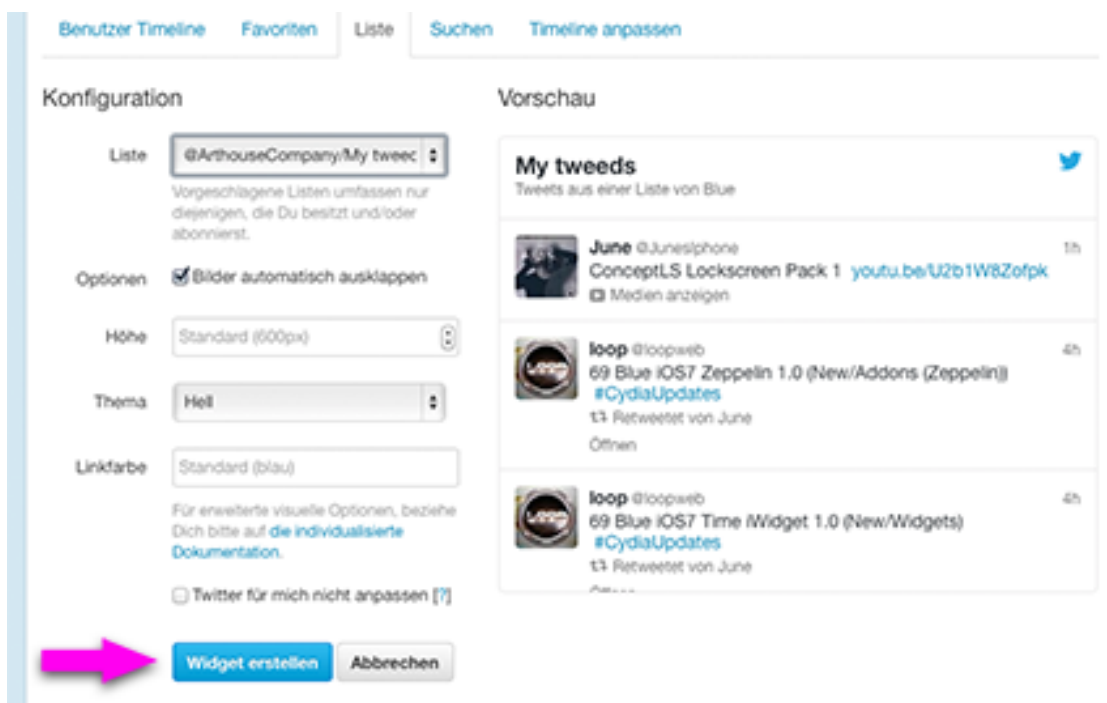

2 Now we need a **Widget ID/Number** for your own Twitter List

Open <https://twitter.com/settings/widgets> and log in to your Twitter account.

choose: **New Widget**

now choose **create Widget** (forget about all other settings at this website)

Now you see a widget code at bottom right. **Inside is your WidgetID/Number** that we need for the iWidget.

```
</style>

</
img>

</head>

<body onLoad="onLoad();">

<a class="twitter-timeline" width= 280
height=236 href="https://twitter.com/
ArthouseCompany/my-tweets" data-widget-
id="429697191280508928" data-chrome="nofooter
noheader transparent" data-
theme="dark">.....</a>
<script>!function(d,s,id){var
js,fjs=d.getElementsByTagName(s)[0],p=/
^http:/.test(d.location)?'http':'https';if(!
d.getElementById(id))
(js=d.createElement(s);js.id=id;js.src=p+"://
platform.twitter.com/
widgets.js";fjs.parentNode.insertBefore(js,fjs
));}(document,"script","twitter-wjs");</
script>

</body>

</html>
```

That's ist. Make sure you **save this number** somewhere, in case this package will be updated. But you can also **see this number if you open the Twitter Website** (see link above) and choose your Twitter widget from there.
